

NetHabilis® InfoHabilis®

Solution overview

NetHabilis offers a dynamic multilingual and multimedia web content management and publishing system, **NetHabilis® InfoHabilis® .NET v3.0**.

NetHabilis® InfoHabilis® enables every company and organization to create, maintain and publish dynamic content on the Internet, in any language required, easily and quickly, without the need to employ special technical personnel every time the need arises (web programmers, web designers, etc).

The system facilitates content processing of any company web page, through a simple, yet effective, distributed content processing system, using web page templates and databases.

Target audience

NetHabilis® InfoHabilis® is intended for any company and organization that creates and maintains web sites, in one or more languages (product catalogues, projects, news, articles, press releases, etc).

NetHabilis® InfoHabilis® empowers the non-technical personnel of any company or organization to easily and quickly create, maintain and publish multimedia web content, such as:

- Text in any style and format
- still and animated images
- streaming audio (Microsoft® Windows® Audio)
- streaming video (Microsoft® Windows® Video)
- Macromedia® Flash™ movies
- All Microsoft® Office® files
- etc.

Solution architecture

NetHabilis® InfoHabilis® is a standard web application accessible over the web, by any registered and authenticated company employee. The system is composed of a number of different subsystems. These include:

Creation, maintenance and publishing of multilingual and dynamic multimedia content on the Internet.

☐ Synopsis

The Internet is a powerful information and business transaction tool for every company and organization, irrespective of area of activity.

The Internet enables companies to address a large number of customers both at a national and at an international level, at a fraction of the cost to alternative communication methods (print, radio, television, etc).

Time is money. For companies, this is even more true, so the promotion of products and services must be done quickly, with agility, and always one step ahead of the competition.

NetHabilis® InfoHabilis® represents a valuable tool for any company that creates, maintains and publishes multilingual, dynamic content to promote its products and services.

Now, you have the opportunity to offer your business the ability to provide your clients with full and dynamic information with respect to the products and services, in any language required.

You should always keep in mind that a web site that does not update its contents regularly, it is not going to have many visitors.

Do remember that every web site customer was first a visitor to your site, so...

Keep them coming!

- Dynamic Page Management System (no restriction in the number of pages and languages created)
- Dynamic web site menu structure Management System
- Website Member Management System
- Newsletter Management System
- Website User Management System
- Website Language Management System
- News Management System
- Multimedia Content Management System
- FAQs Management System
- Product/Services Management System

The NetHabilis® InfoHabilis® system users, can access the full functionality of the application using a simple web browser, such as Microsoft® Internet Explorer™, without the need to purchase additional software (i.e. database, Microsoft® Word™, Microsoft® Excel™, etc) for the creation and maintenance of the company web content.

Solution benefits

The usage of NetHabilis® InfoHabilis®, offers the following benefits:

- Ability for the content of the company web site to be available in as many languages as it is required. The company website visitors easily select the language of their choice, while visiting the company website, and the NetHabilis® InfoHabilis® system provides them with the requested content, in the language of their choice.
- Automatic provision of localised web content in the preferred language of the web site visitor, when available. Please note that the localised content must already be published on the website.
- The inherent multilingualism of the system offers great ease of navigation to the visitors of the company web site. For example, when a visitor changes the language of the website, they do not have to start from the home page, they just continue from the localised version of the page they had originally selected.
- The inherent multilingualism nature of the system allows for the dynamic addition of any language (Greek, Latin, Asian, Cyrillic, Chinese, etc), whenever needed, during the operational life of the company website, without manual intervention in the structure of the web site.
- Automatic protection filtering of all e-mail addresses present on the website from spam engines and web crawlers. This way, the company personnel can use their e-mails addresses for effective communication with their visitors, without worrying that the e-mail addresses will end up in spam engine listings, etc.
- Ability for non-technical company employees to create web pages, in any language required, quickly and easily, without the help of special technical personnel (web developers, web designers, etc).
- Ability to create multiple and dynamic interconnections (links) between web pages, from any page to any other page, irrespectively of language and / or page level.
- Dynamic presentation of company products and / or services, without restrictions on the type, format and quantity of the content to be presented.
